	RADIO CONTROLLED TOY VEHICLE	: No. 4110-183/165U1

In response to the Office Action mailed October 7, 2002 (paper no. 4), please amend the above-identified application as follows:

RECEIVED
DEC 18 2002

TECHNOLOGY CENTER R3700

1. (Amended) In a communication system for transmitting control signals from a remote control to a toy vehicle, the remote control including control switches, an encoder and a transmitter, the toy vehicle including a receiver, a decoder and actuators for controlling the operation of the toy vehicle in accordance with control signals received from the remote control, wherein the improvement comprises:

the encoder generating a continuous stream of control signal packets which are continuously transmitted at a constant frequency, each of the packets including a predetermined number of biphasic encoded bits, each biphasic bit being of the same predetermined width with a fifty percent duty cycle including two transmit elements with one binary state being defined as both of the transmit elements of a bit being opposite, each packet including a first predetermined
